OPTIMIZING HYGIENE, REGENERATIVE AND IMPLANT DENTISTRY IN THE EVERYDAY CLINICAL PRACTICE

In Association with Dr Steven Liu
Monday, October 13, 2014

Program description
This program focuses on innovative approaches to establishing optimal periodontal therapy and utilization of regenerative therapies in everyday clinical practice. The program provides practices with tips and tools to optimize periodontal therapy and explore the advances, capabilities and benefits of periodontal regeneration. Emphasis is placed on implementing effective treatment protocols and how biologic modifiers, particularly enamel matrix derivative, are used to regenerate lost hard and soft tissue. Establishing effective practices and patient communication to enhance case presentation and case acceptance of these therapies is a highlight of the program. Additionally, participants will learn about the importance of educating the hygienists in your practice to identify appropriate case selection for regenerative therapy.

Learning objectives
- Implement systems to create a more periodontally aware practice
- Establish evidence-based periodontal treatment protocols
- Understand the biologic basis for bone and soft tissue response
- Understand the indications, method of use and regenerative potential of enamel matrix derivative and other biologic modifiers
- Implement effective communication to help treatment acceptance
- Implement systems to create a more periodontally aware practice, when to refer, and why dentistry can help differentiate and grow your practice
- Facilitate communication and comprehensive treatment planning with all members of the care team

Speaker
Tracy Anderson Butler, RDH, MFT

Date
Monday, October 13, 2014

Time
6:00 pm - 6:30 pm Registration
